SIZING CHART ⁶⁵

HOW TO MEASURE

- For best results, have someone else take measurements.
- Measure body in underwear.
- Tape must be snug but not tight.
- If measurements fall between two sizes, order the larger size.

1 HEAD	Around your head, from the center of the forehead, above the ears and over the natural bump at the back of the head.
2 ARM LENGTH	Let the hands hang down on the side in a slightly bent position. Measure from the center of the back of your neck, along the length of your arm, to the wrist.
3 CHEST/BUST	Measure under your arms, around the fullest part of your chest.
4 WAIST	Measure around your natural waistline, keeping one finger between the tape and body.
5 INSEAM	Without shoes, from crotch to the floor.
GLOVES	Measure palm width.

WHAT CODE REPRESENTS YOUR SIZE?

CHOOSING THE RIGHT ONE CAN IMPACT POWER & PERFORMANCE.

A drive belt is the essential link between engine & drivetrain, so there's no overstating its importance for obtaining maximum power & efficiency. If your drive belt can't reach & maintain performance, then no amount fine-tuning or performance customization will make a difference.

Clutches & gears are calibrated for optimum ride-specific performance, so it only makes sense to use a specialized ride-specific drive belt too.

Our engineers always consider the heat generation & load conditions created by different riding styles. For example, the Maverick X3 produces higher drivetrain loads at hard throttle through dunes and requires a stiffer drive belt with high heat resistance. But a heavily loaded utility vehicle can also encounter high drivetrain loads. However, the clutch calibration, engine, RPM, velocity, and work environment differ significantly necessitating a drive belt optimized for those conditions. That's why it's so important to choose the right drive belt.

Always make sure you match any replacement drive belt to the requirements of your BRP vehicle's make & year of manufacture. While third-party and BRP drive belts are identical in size & shape, ours were designed to deliver the highest levels of performance & longevity based upon your vehicle's specific end-use and calibration.

WHAT MAKES OUR BELT STAND OUT?

One essential material stands among our drive belt components; aramid. Aramid, commonly used in the manufacture of drive belts, is a heat and abrasion resistant man-made fiber that improves the strength & durability of rubber.

- Top cog with special aramid fiber
- Adhesion rubber
- Specialized high-modulus aramid cord
- Compressive rubber with high-modulus PBO fiber
- Bottom cog with aramid fabric
