RIDING GEAR

## THERMAL BASE LAYERS

P.48

## STAYING WARM MEANS STAYING DRY FIRST. MATCH YOUR COMFORT TO YOUR RIDING STYLE WITH OUR SNOWMOBILE-SPECIFIC BASE AND MID LAYERS

### HOW IT WORKS

Each layer has a function.

You get the best performance and versatility when you dress in a system with **base layer**, **mid layer** and **outer layer**.

#### OUTER LAYER

Keeps wind and water out and breathes. Adds insulation for warmth.

#### MID LAYER

Dials in your warmth level. Add or remove during the day as conditions change.

#### BASE LAYER

Close to the body to wick perspiration and prevent chills. Adds warmth and keeps you dry. Avoid cotton — it gets wet and stays wet.

### CREATE YOUR OWN CLIMATE

The combination of base layer, mid layer and outer layer works together to keep you warm and comfortable. Select and combine each to create your own climate for how you ride. For instance:

#### ACTIVE MOUNTAIN RIDER

Needs highly breathable gear to let perspiration escape.

#### ACTIVE TRAIL RIDER

Needs breathability with a bit more insulation, especially in colder climates.

#### LONG DISTANCE CRUISER

Needs more thermal gear with added insulation.

We've made it easy to choose just the right gear. Look for these ratings with each layer. You can even add the warmth ratings of different layers together for an overall system rating.

#### WARMTH

This rating considers all aspects of the garment, including insulation, waterproofness, windproofness, breathability and fabric construction. Use it as your main criteria.

#### BREATHABILITY

This rating indicates how effectively perspiration is moved away from your body and out of the garment.

#### WATERPROOF/ WINDPROOF

This rating reflects the technology used, sealed seams, zipper types and more.

# TOE-HOLDS & FOOTRESTS

## FREEDOM FOR YOUR FEET

REV Gen4 sleds' open foot area let you decide how to connect with your ride.

REV Gen4 sleds are so agile in deep snow, you just need to lean to carve. With Summit toe-holds, you can lock your boots in place for added leverage when leaning. The Adjustable Toe-Holds are spring loaded so when you're moving from side-to-side, they fold downward and stay out of the way. Whichever you choose, it's a totally new riding experience you need to try.

## CUSTOMIZE YOUR SLED FOR HOW YOU RIDE:

**Do you push outward with your feet when cornering?**

→ Add the **1 Lateral Footplates** for added leverage and comfort.

**Like the freedom to pivot your feet with the open toe-holds, but want a tighter fit for the top of your boot?**

→ Install the **2 Shim Kit** (both 10 mm and 20 mm shims are included).

**Want a fully locked-in feel and fit?**

→ Use the **1 Lateral Footplates** and the **2 Shim Kit** to keep those boots snug.

## SKIS

Skis make all the difference in getting your sled to handle just how you like. We offer seven different styles of skis for you to choose from. Which one is right for you? Here's some tips on choosing the right one:

### Pilot 5.7

Standard on many models. Lightweight dual-keel design offers great balance between steering effort. A runner is standard on the center keel and a second runner can be added to the outside keel to reduce darting. For most trail riders, this is a great choice.

### Pilot 5.7 SL

Straight Line delivers light steering effort with less darting. Perfect for touring applications or smaller riders.

### NEW Pilot R2

Very aggressive profile for sharp handling. Low weight with high rigidity. Handle meets racing regulations.

### Pilot DS

Designed specifically for deep snow riding. Works well in many off trail applications from utility sleds to mountain sleds for all types of riders. Thin edge grabs sidehills well.

### Pilot DS-2

An evolution of the Pilot DS with a deeper and shorter center keel for deep snow applications. This version offers increased agility and less turning effort than the original. Standard on mountain sleds with 2.5" lug tracks and utility sleds, this ski is great for all around use for all types of deep snow riders.

### Pilot DS-3

Deep snow ski designed to match the latest 3" lug and longer tracks. Matches up well with aggressive riders using the biggest tracks.

### Pilot TS ADJUSTABLE

The ultimate trail solution offering adjustment with the turn of a knob. Fits all riding styles except deep snow. Revolutionary design enables you to dial in ski bite instantly for changing conditions or your riding style. The thin runner adjusts 1/2" (12.5 mm) up and down to find your sweet spot. Square shape of keel aids in preventing darting.

To install the studs, always use the installation tools, procedures and torque specified in the instructions. Proper installation provides maximum product longevity and helps prevent track damage. BRP recommends that studs be installed by authorized BRP dealers, and on approved pre-patterned tracks only. These tracks come standard on most 2018 Ski-Doo snowmobiles. Look for this symbol on your track. Woody's products are designed to fit and interact with each other. The stud nut and support plate form a complete unit. The use of aggressive skis, ski carbide runners or studs will alter the handling of your snowmobile, particularly in terms of manoeuvrability, acceleration and braking. Please refer to your Operators Guide for more details.

SCS has led the industry with fresh looks that complement both sleds and riders. With designs from wild to mild, they can give your new – or older – sled a look all its own. Especially when you consider how they can customize an existing design with colors and logos, and even create a design you come up with.

The wraps are of the highest quality – 4 mil vinyl overlaid with an 8 mil UV protective laminate. You get bright vibrant colors that hold up to both the rigors of snowmobiling and harsh weather conditions.

**YOUR SLED IS THE SUM OF ITS PARTS.**  
**MAKE EVERY ONE COUNT BY USING ONLY GENUINE BRP PARTS.**

## WHY YOU SHOULD USE GENUINE BRP PARTS

**Don't take a chance with your valuable Ski-Doo snowmobiles – when replacing parts, use only genuine BRP parts.**

BRP parts take into account the complete vehicle and its performance - protecting our reputation and your valuable investment.

BRP parts are manufactured to our original equipment standards for materials, finish and fit.

**BRP PARTS ARE ENGINEERED  
AND TESTED TO THE HIGHER  
STANDARD – YOURS.**

PLUS:

- Physical field testing
- Extended wear testing
- Laboratory testing
- Harsh environment and element testing
- UV and exposure testing

With BRP parts, you get the peace-of-mind of a **FULL ONE YEAR WARRANTY**. That's whether they're installed by you or your authorized BRP dealer. And if they're installed by your dealer, labor is covered, too.

BRP rebuilt components are cost-effective and time-saving solutions. BRP rebuilt parts carry the same one year warranty for major assemblies like short blocks, cylinders and crankshafts.

# BRP ENGINE REBUILD CENTER

Experienced BRP technicians use only new, original Rotax parts — there's no cutting corners and reusing parts that "look good." For instance, when rebuilding a crankshaft, ALL bearings, rods, pins and seals are replaced, regardless of condition.

Rebuilt short blocks get new pistons, rings, gaskets, crankshaft rods, pins, bearings and seals - every wear item is replaced with new genuine Rotax parts.

The BRP Rebuild Center has been providing this service to dealers and consumers for more than 30 years.

BRP has a Rebuild Center for snowmobile engines, short blocks, cylinders and crankshafts. Available from your dealer, rebuilt parts come with a one year warranty and save you significant money.
